PROFESSIONAL SUMMARY

Over 8 years of experience in software development and information technology with an innovative mindset, particularly for specializations in areas of full stack software development, testing, cloud computing, quality assurance, embedded systems, and cybersecurity.

EDUCATION

McMaster University | Bachelor of Engineering in Mechatronics (Co-op) May 2020

- Recipient, Dean's Honors List; Recipient, Admission Scholarship; Member, Software Engineering Club

Relevant Courses:

- Databases, Networks and Security, Real-Time Systems, Circuits, Control Applications, Signals & Systems, Operating Systems, Embedded Systems, Product Design, Materials, Robotics, CAD Design, Software Development

University of California – Berkeley | Course Certificate in Introduction to Cybersecurity (COMPSCI X401.9) Jun. 2019

EXPERIENCE

CoreLogic

Remote Full-Time | Irvine, California

Senior Software Engineer

Jul. 2024 – Present

Software Engineer

Mar. 2023 – Jun. 2024

- Led a cross-functional team of seven to redesign the UI and UX for the Lender Portal of the Digital Mortgage Platform (DMP), successfully enhancing user interactions for lender and admin users, resulting in positive user feedback praising the intuitive design and ease of navigation.
- Spearheaded the development of new frontend components using React and the Material-UI (MUI) framework, facilitating collaboration among product designers, managers, and DevOps teams in an Agile environment to ensure alignment on project goals and timely delivery.
- Engineered robust, scalable APIs from scratch using Ruby on Rails for the Lender Portal, ensuring seamless integration with new frontend; this architecture optimized data retrieval and processing times, enhancing overall application performance, and enabling the application to handle a 50% increase in concurrent users without degradation.
- Achieved a 33% increase in user satisfaction scores and a 25% growth in new client acquisitions within three months of launch by implementing user feedback and analytics into the project cycle, demonstrating the positive impact of the redesigned Lender Portal.
- Modernized the outdated Scenario Builder mortgage pricing tool by collaborating with a peer to overhaul its UI and UX using React, while managing the removal of an outdated backend middleware framework, resulting in the successful delivery of the revamped DBLG (Decision Builder) tool that led to a 40% increase in client usage among major partners.
- Designed and implemented two streamlined API endpoints from the ground up using Ruby on Rails for the DBLG (Decision Builder) tool, consolidating essential functionalities into these two endpoints; this architectural enhancement improved data management efficiency and reduced API response times by 35%.
- Championed the enhancement of a robust testing framework using TypeScript and React for automated testing, significantly improving test coverage and code reusability; this initiative enhanced software quality and reliability, resulting in a 100% reduction in known bug occurrences and fostering a culture of continuous improvement within the development team.
- Collaborated with QA and DevOps teams, utilizing tools like Postman, Splunk, Chrome DevTools, Playwright, and Selenium, resulting in a 20% decrease in average turnaround time for release and deployment efficiency improvement.
- Led cross-functional collaboration with the integrations team on microservices architecture to implement new features related to the product pricing engine, credit pull services, and automated underwriter services such as LPA/DU.
- Successfully delivered new features and enhancements aligned with business needs, achieving a 15% increase in client retention due to improved product functionality and responsiveness, displaying the ability to drive strategic initiatives effectively.

Roostify

Remote Full-Time | San Francisco, California

Technical Support Software Engineer IV

Jul. 2021 – Feb. 2023

- Responded to all priority of client escalations not resolved by L2/L3 Support on a weekly basis, ensuring prompt and effective resolution of technical issues and next steps.
- Collaborated closely with Client Support, DevOps, and QA teams to replicate, troubleshoot, fix, and deploy code, resolving complex problems within tight timelines.
- Conducted in-depth analysis of priority issues, including root cause identification through code and server log analysis, delivering clear explanations to internal and external stakeholders.
- Assisted in addressing client-reported bugs and occasionally contributed to new product feature development, liaising with the product team on the product roadmap.
- Managed high visibility, strategic support-escalated cases, ensuring total customer satisfaction by promptly and comprehensively resolving technical challenges.
- Took ownership of customer issues, overseeing troubleshooting, resolution, and effective communication with cross-functional teams.
- Defined feature requests and captured bugs, maintaining regular follow-up with clients until satisfactory solutions achieved.
- Developed proficiency in navigating Roostify diverse codebase in Ruby on Rails and Java environments, and related dependencies and gems in an MVC framework and Docker environment.
- Wrote server-side web application logic and created ad hoc scripts in Ruby.
- Maintained and improved legacy web applications to enhance performance and user experience and adopted development of enhanced features coded in React, JavaScript, TypeScript.
- Collaborated closely with Tiers 2 and 3 support and engineering teams, facilitating escalations, product roadmap changes, and new feature implementation, managing the process in Jira, Zendesk.
- Identified customer education gaps and challenges, executing training programs to enhance technical support team skills.
- Conducted in-depth research to identify root causes for complex tickets or issues lacking support documentation.
- Created and published solution knowledge base resources for customer and internal use.

Robocart.ai

Remote Contract | Santa Clara, California, USA

Software Developer

Jan. 2021 – Jul. 2021

- Worked with clients to develop the overall look and design of a website to gain clear understanding of producing, maintaining, and modifying website UI/UX.
- Wrote website code with programming languages HTML, CSS, Python, C++, and JavaScript while incorporating applications, graphics, audio, and video clips into client website.
- Routinely tested websites for ease of use, speed and other quality factors and fixed any website issues or bugs that arose.
- Collaborated with members of the website team, including designers and back-end developers, to consistently improve functionality and user-friendliness of web applications.
- Created quality mock-ups and prototypes on tight timelines while maintaining graphic standards and branding throughout the product's interface while keeping up to date on emerging technologies and usability best practices.

Longan Vision

Hybrid Contract | Hamilton, Ontario, Canada

Software Developer

Sep. 2019 – Dec. 2020

- Defined formal testing techniques, processes, and risk-based testing and reviewed assigned tasks to ensure QA best practices.
- Defined and checked metrics against acceptance criteria in order to make decisions on suspending test cycle until defects are resolved or moving on to next test phase if successfully passed.
- Planned and created test plan consisting of the scope, approach, resources, and schedule of intended test activities in the testing landscape through a variety of different automation testing methods used in the SDLC.
- Documented clear, concise, and comprehensive test plans and test cases to automate software testing and validate functionality.
- Performed front-end software development using working knowledge of Python, JavaScript, HTML, CSS to create functional log-in

and signup forms for web app.

- Utilized relational database and SQL knowledge to store data on PostgreSQL database using AWS S3 cloud bucket services.
- Conducted software QA testing on dynamic web application using Selenium suite (WebDriver, TestNG, JUnit).
- Performed unit testing to provide feedback on performance of web application code, integration testing to ensure seamless performance of the different application components, load testing to simulate high traffic demand at high speed, functional testing, and regression testing to check for expected functional behaviour.
- Concluded test cycles with UAT testing to ensure application can manage real-life scenarios before deployment.
- Followed Agile methodology working with Scrum Master to ensure deliverables met within allocated sprint deadlines.
- Performed triaging/bug tracking and tracked progress utilizing Jira to organize and ensure transparency across the team.
- Oversaw version control with Git with command line to contribute source code to central repository.
- Communicated technical information in an easily understood manner to non-technical people and to CTO, CEO.
- Presented final web application to group of 5G investors and industry personnel and received \$2000 grant prize.

President's Choice Financial (Loblaw Companies Ltd.)

Co-op Internship | Toronto, Ontario, Canada

Information Technology Consumer Solutions Delivery Analyst

May 2018 - Sep. 2019

- Configured and used security software intended to ensure that corporate systems are secure from unauthorized use, viral infection, and other vulnerabilities that would compromise overall enterprise security.
- Developed and implemented security standards and procedures to increase the security, reliability and accessibility of applications, networks and infrastructure components via patches and updates.
- Executed Security Incident Response activities and ensuring the proper protection or corrective measures were taken when an incident/vulnerability has been discovered by escalating to appropriate resource and team.
- Performed daily monitoring of Security Incident and Event Management, as well as developed a knowledge base of incidents, events, and vulnerability management/remediation, scanned security reports for high-risk exploits and bugs.
- Worked with ServiceNow IT Service Management console to create Change Requests for manual process improvements and decommissioning and other IT services (Change Management, Problem Management, Incident Management).
- Lead large weekly conference calls and meetings with in multi-functional teams and followed technical conversations with consultants from Accenture, Cognizant, and Deloitte and translated that for nontechnical stakeholders and senior management.
- Supported efforts with data protection, IoT, and transparency in all SDLC meetings in an Agile Scrum environment and CI/CD.

TECHNICAL SKILLS

- Programming Languages: Ruby, JavaScript, Python, C++, HTML, CSS, TypeScript
- Frameworks and Libraries: React, Ruby on Rails, Material-UI (MUI)
- Tools and Technologies: Docker, Kubernetes, PostgreSQL, AWS (S3, EC2), Git, Jenkins, CircleCI
- Cloud Computing: AWS, Azure, Heroku
- Testing and QA Tools: Selenium, Playwright, TestNG, JUnit
- Development Practices: Agile methodologies (Scrum, Kanban), CI/CD
- Collaboration and Communication Tools: MS Teams, Slack, Outlook, Gmail, Confluence
- Monitoring and Analytics Tools: New Relic, Looker, Splunk, Prometheus, Grafana
- Security Practices: Security Incident and Event Management, vulnerability management
